

The American Association of Orthodontists recommends all children get a check-up with an orthodontic specialist at age 7. While your child's teeth may appear to be straight, there could be a problem that only an orthodontist can detect.

- Orthodontists can spot subtle problems with jaw growth and emerging teeth while some baby teeth are still present. Additionally airway & breathing issues such as tonsil, adenoid, snoring or sleep apnea may be detected.

- A check-up may reveal that your child's bite is fine, or the orthodontist may identify a developing problem and recommend monitoring the child's growth and development.

- Early treatment may prevent or intercept more serious problems from developing and may make treatment at a later age shorter and less complicated.

- Early treatment may give your orthodontist the chance to:
 - Guide jaw growth
 - Lower the risk of trauma to protruded front teeth
 - Correct harmful oral habits
 - Improve appearance
 - Identify speech, tonsil, or breathing
 - Guide permanent teeth into a more favorable position

An Orthodontic evaluation at age 7 and up, will give your child the best opportunity for a healthy, beautiful smile!
